

Name of the program: Common Criteria Overview

Introduction:

Common Criteria is a framework in which information system users can specify their security requirements, vendors can then implement and/or make claims about the security attributes of their products and testing laboratories can evaluate the products to determine if they actually meet the claims. In order to realize the benefits that use of the CC offers it is essential that practitioners fully understand the CC approach and concepts. This “**Common Criteria overview**” training programme is designed for individuals and organizations planning to build their Information Security products in line with the requirements of CC standards or use the CC certified products in their information management systems.

Objectives:

- To understand the basic concept of CC scheme.
- To understand the CC certification process
- To understand the requirements for CC compliant security products
